Education”**

**Organize**  
**An international symposium on:**

**“Educational engineering in an e-learning device”**

On february 25/26 2019 at the rectorate - Dely Ibrahim- Algiers - Algeria

## Call for papers

The use of ICT has made possible to modify the practices and approaches in terms of education, higher qualification and degree. In this context, the University of Continuing Education is called to integrate these new practices following the prerogative that gives it the ministerial decision N ° 1022 of October 23, 2017, relating to the educating in distance License and Master.

The adoption of these new teaching practices involves the use of new educational tools and "working in mixed educational devices". These trainers, university teachers, have accumulated knowledge in the old practices of university teaching face-to-face, will have to convert to a hybrid mode that integrates teaching and monitoring via digital platforms.

The distance teaching has evolved in relation with the used pedagogical supports, and the increased use of hybrid devices avoids abandonment and failure. This symposium aims to discuss the best practices of e-learning education engineering.

## Symposium Axes

### I / Distance education devices

- The actors of E-Learning;
- Conception of a distance course;
- Online tutoring in a distance learning device;
- The Learning Management Systems, as tools for administration and management of distance learning devices.

## **II / Criteria for evaluation of a distance learning device:**

- Evaluation of a platform;
- Evaluation of the educational content;
- Assessment of learners;
- Evaluation of the stakeholders of the device.

## **III / Effectiveness of an e-learning system in the Algerian context**

- All distance or hybrid system?
- How to reduce failure and abandonment rates?
- Standardization of teaching loads and education costs.

The symposium, which brings together eminent teachers and practitioners in the field of e-learning, is a contribution from the UFC to reflect on the best ways to implement a reference system of distance learning , aiming at its durability in the general context of university training in Algeria
